

Fork Positioner for Forklifts

Forklift Fork Positioner - The fork positioner is actually a hydraulic device that allows the person driving to be able to control the lift truck without leaving the seat. They are constructed out of top quality materials and are intended to withstand the most challenging operations and work surroundings. Side shifting units have the extra ability to laterally position the entire load or the arms in order to facilitate more precise lifting and position in a quicker and much more efficient method.

The only one of its kind fork pocket design enables the individual operating it to securely swing the unit's blades without any fear of destroying the positioning cylinders. This could allow the worker the option to either execute independent or simultaneous fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be transformed into blade positioners on existing units.
